Aquerple

Clear

Confetti

Green

Orange

Red

These Borealis lines were never made with new glitter.
Maple Green was released in 2019, produced from a leftover
stash of old glitter that Chessex found in storage.

old and new glitter comparison

General Information

- Chessex was forced to change the glitter for the Borealis lines because the material was starting to be used in European currency and thus became a controlled substance they no longer had access to.
- The change from the old to the new glitter occurred some time around 2016, but there is no fixed cut-off date as the change was gradual.
- Borealis Aquerple, Clear, Confetti, Green, Orange and Red were only made with old glitter. There are no new glitter versions of these.
- Borealis Confetti, Green, Orange and Red were limited runs, and thus are now very hard to find (and expensive to acquire).
- Pipped Borealis Magenta dice were never produced with new glitter. All pipped Magenta dice are OG.
- Borealis Maple Green was a line newly released in spring 2019 with Chessex' last remaining stock of the old glitter that had been found in a warehouse.
- Sometimes old glitter dice are labeled OOG (old old glitter), which is a misnomer because it implies there is a third type of glitter, which there is not. OOG usually indicates that the die is more translucent, which Chessex has confirmed to be an unintentional production variance. This is especially prominent in the Smoke and Magenta lines. OOG dice have the same type of glitter as OG dice.
